

Fast Feed Shelf Management System

What if you could *reduce costs, increase sales and improve store presentation*, all at the same time? With *Fast Feed* you can!

THE FAST FEED SHELF MANAGEMENT SYSTEM allows stock to slide to the front of the shelf with only minimal inclination from front to back.

Fast Feed can be made in any colour in production quantities. **Repositionable dividers** simply slide into slots running the full length of the injection molded trays. There is **no waste space** with *Fast Feed*, as the divider slots are located every 5mm across the full tray width.

Fast Feed's modular design means it will fit 600mm, 900mm or 1200mm shelving. Retail shelving always looks well stocked as gaps close up as stock is removed.

The rear topple bar prevents stock sliding out the back of the shelf and the front scanstrip provides display area for tickets and barcodes.

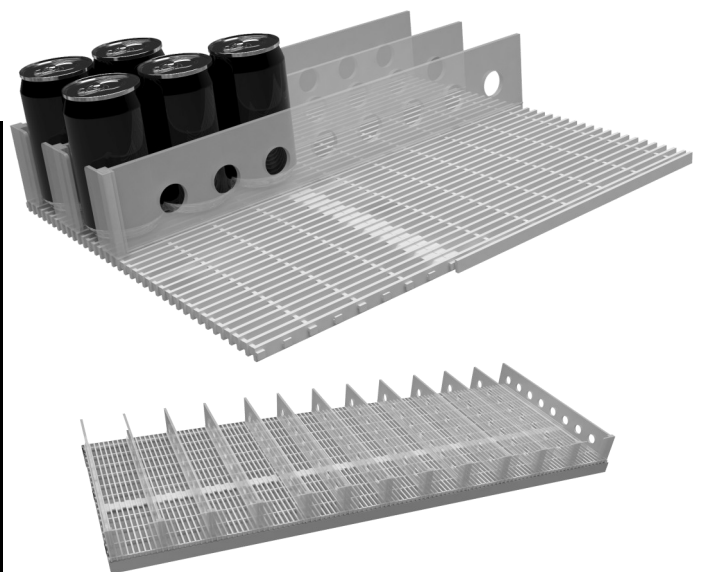

Rear Topple Bar

Fast Feed Scanstrip

Code	Description	Size
FF-MAT	Fast Feed Mat	710 x 635mm
FF-DIVH	High Divider - No front	590 x 120mm
